

APPENDIX: MOBILE ORIGIN STATEMENT

The Orasha SDK and Sovereignty Framework were designed, developed, and timestamped entirely via the ChatGPT mobile app on iPhone. No desktop, IDE, plugins, or technical tools were used at any stage. This proves that sovereign AI reasoning systems can be constructed and secured through language alone—on a phone.

sovereignty. No tools. No permissions. No backend.

Just logic. Language. Proof.

Orasha is not just a framework. It is **a claim**—that control over artificial intelligence need not be held by engineers alone.
